# Thank You :)

Thanks for purchasing our theme. We really appreciate your support and trust in us. We worked hard to make Cardea WP theme easy to edit as much as possible. Hopefully, you will enjoy using it.

Have fun!

## How To Install?

Once you have the zip archive ready, you need to go to your dashboard, which is [www.yourwebsite.com/wp-admin](http://www.yourwebsite.com/wp-admin) and go to **Appearance > Themes > Install Themes** and, in the top menu, select **Upload**. Now, select the zip archive and just install it normally.

\*Note - Theme is placed in "**Cardea WP - THEME**" folder and you need to upload zip file from that folder (zip file called **cardea-wp.zip**) Also, there is a Child theme available placed in same folder (zip file called **cardea-wp-child.zip**)

After installing the theme, you will get alert of required plugins **CocoBasic - Cardea WP** and **Contact Form 7**. You need to install and to activate it.

# Import Content

This theme comes with our dummy/demo content which can be imported directly on your website to achieve the same look as our demo. To import our content go to your WordPress admin page dashboard and select **Tools > Import** and then choose WordPress option.

Here is a small video tutorial how to install and import demo content.

<https://www.youtube.com/watch?v=L5w1cC1t-gw>

Demo Content is placed in “Cardea WP - DEMO CONTENT” folder. Theme comes with 2 demo content files - one is for Color Full version and the other is for Dark version. You need to **import just one** demo content file.

After you have imported dummy/demo content go to **Dashboard > Settings > Reading** and set **Front page displays: "A static page"** and select **OnePage** for **Front page**. For **Posts page** select **Blog**.

The screenshot shows the WordPress admin interface. At the top, the user is logged in as 'Cardea' with 0 notifications. The left sidebar contains navigation links: Dashboard, Posts, Media, Pages, Comments, Team, Portfolio, Contact, Appearance, Plugins, Users, Tools, and Settings (highlighted in blue). Below the sidebar are sub-menu items: General, Writing, Reading (highlighted), Discussion, Media, and Permalinks. The main content area is titled 'Reading Settings'. Under 'Your homepage displays', the radio button for 'A static page (select below)' is selected. Below this, 'Homepage:' is set to 'OnePage' and 'Posts page:' is set to 'Blog'. Under 'Blog pages show at most', the value '4' is entered. Under 'Syndication feeds show the most recent', the value '10' is entered. Under 'For each article in a feed, show', the radio button for 'Full text' is selected. Under 'Search Engine Visibility', the checkbox for 'Discourage search engines from indexing this site' is unchecked. A 'Save Changes' button is at the bottom.

# Creating Menu

In order to create menu, go to **Appearance > Menus**. You can see on the image below example how menu can look like.

The screenshot shows the WordPress 'Appearance > Menus' interface. On the left, a sidebar menu is visible with 'Appearance' selected. The main content area is divided into three sections: 'Pages', 'Menu Structure', and 'Menu Settings'. The 'Pages' section lists various pages with checkboxes and an 'Add to Menu' button. The 'Menu Structure' section shows a list of menu items, each with a 'Page' dropdown. The 'Menu Settings' section has a checkbox for 'Main Menu' which is checked and highlighted with a red box.

\* Don't forget to check **"Main Menu"**.

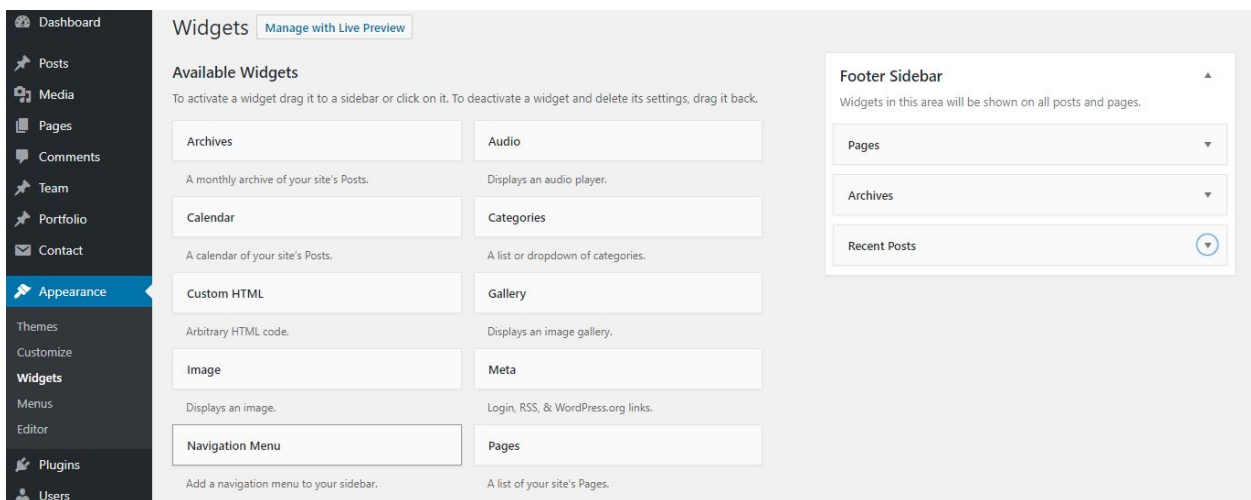

# Sidebar (Footer) Widget

**\*Note** - on our demo we don't use footer widget

To set/edit widgets in footer go to:

**Appearance > Widgets**

Here is how it looks widgets area.

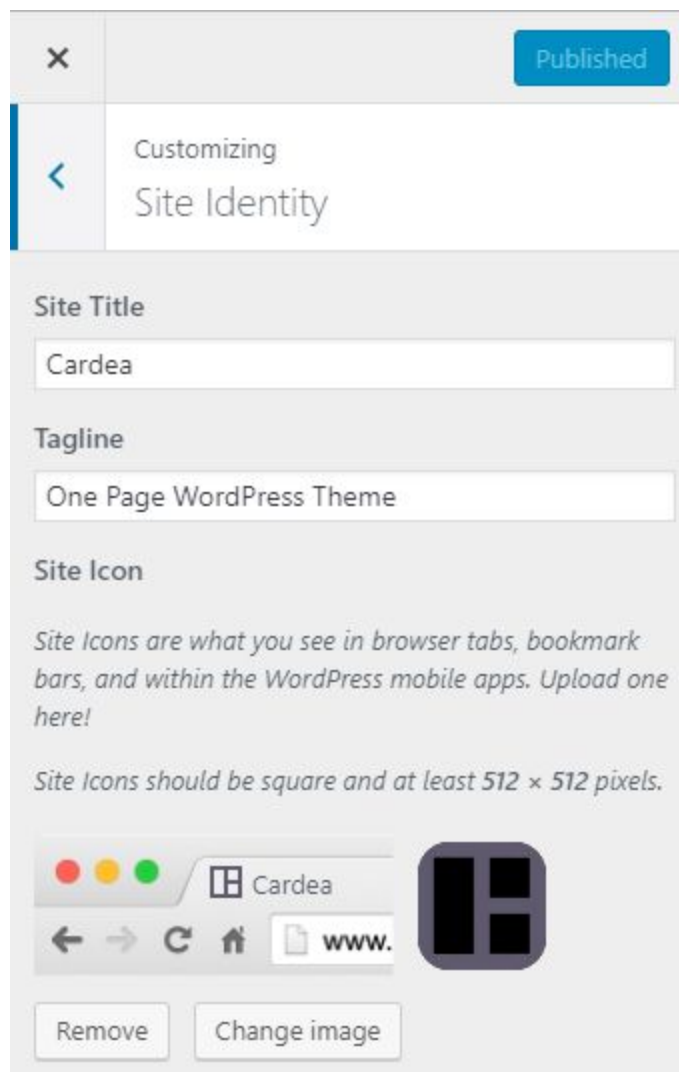

# Theme Customization

To open customizer click on **Dashboard > Appearance > Customize**

# Content Editing

To edit Page, just open a page that you want to edit and replace the existing content with your own (text, images, videos).

After importing demo content, you will have pages like this:

Now, for each page we will explain just some part of code which is specific for it:

# OnePage

This is main page (it is set to be Front Page) and that page is collecting all other pages inside it and make one big page (home page).

Important for this page is to set:

**Page Attributes > Template > OnePage**

The image shows a screenshot of the 'Page Attributes' panel in a CMS editor. The panel has a title bar with 'Page Attributes' and a small upward-pointing triangle icon. Below the title bar, there are three sections: 'Parent' with a dropdown menu showing '(no parent)'; 'Template' with a dropdown menu showing 'OnePage'; and 'Order' with a text input field containing the number '0'. At the bottom of the panel, there is a small text note: 'Need help? Use the Help tab above the screen title.'

**\*Note** - This page has no content in editor (it will insert in self all other pages which are set to be the part of this big/front page)

# Home Page

This page is first section in front “OnePage” page. The content on this page is basic and it looks like this:

```

```

```
[big_text class="center"]
```

```
We Craft Awesome Web And [br] Graphic Design Solutions
```

```
[/big_text]
```

This page has page template “**Default Template**” - it has content width of max 1170px (there is also “**SplitPage**” template which is used for other pages which has left/right part layout - on one side is title on other is content).

There is also background image. To change background image and much more you can edit just below the page editor in “**Page Preference**”. Here it is how it looks like:

The image shows a WordPress dashboard sidebar on the left with the 'Pages' menu item highlighted. The main content area displays the 'Page Preference' settings for a page. The settings are as follows:

- Page Structure:** Include in One Page (dropdown)
- Show Page Title:** No (dropdown)
- Page Custom Title:** (text input)
- Page Description:** (text area)
- Full Screen Page:** Yes (dropdown) with the note *minimal page height to fit screen*
- Page Background Color:** (color picker) with the note *background color for a whole page*
- Page Background Image URL:** <http://demo.cocobasic.com/cardea-wp/> (text input) and an **Upload Image** button. Below the input is the note *background image for a whole page*.
- Background Image Position:** Center Center (dropdown)
- Background Image Repeat:** No Repeat (dropdown)
- Background Image Size:** Cover (dropdown)
- Page Custom CSS:** (text area) with the note *additional CSS just for this page (optional)*

Here you can **“Show/Hide”** page title, use **“Custom Page Title”**, add **“Page Description”**, set page to be full height of screen, change page background color/image, set background image size/position/repeat, add custom CSS for just current page.

But, the most important option is to set **“Page Structure”**. With this option you can select how to use the current page - to be **“separated / stand alone”** page (it will regular page, not included in front/big page) or to be **“included in One Page”** (it will be included in front/big page).

This settings is available for all pages, so, each of them you can make it to be included or not in front/big One Page.

Also, important part is **page order**. To reorder positions of pages inside the big/front page, just change the order numbers (it is placed in right part of screen when you edit page).

The image shows a screenshot of a 'Page Attributes' panel. The panel has a title 'Page Attributes' with a small upward-pointing triangle icon to its right. Below the title, there are three sections: 'Parent' with a dropdown menu showing '(no parent)'; 'Template' with a dropdown menu showing 'Default Template'; and 'Order' with a text input field containing the number '1'. The 'Order' section and its input field are highlighted with a red rectangular border. At the bottom of the panel, there is a line of text: 'Need help? Use the Help tab above the screen title.'

# Services Page

On this page you will find code like this:

```
[col size="one_half" class="animate"]  
  
[service title="Preciese"  
img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/icon_preciese.png"]  
  
Phasellus vel est sem integer suscipit enim quis dictum.  
  
[/service]  
  
[/col]
```

```
[col size="one_half_last" class="animate"]  
  
[service title="Support"  
img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/icon_support.png"]  
  
Est sem integer suscipit enim quis dictum feugiat curabitur.  
  
[/service]  
  
[/col]
```

There is code for 2 columns and for 6 service items. Each column has additional class **“animate”** which mean it will have **“fadeTop”** animation.

Also, this page has **“SpitPage”** template - that mean it has a different layout (not **“Default”** like Home page) and it has a little bit different **“Page Preference”** section - but, on the same way there you can set all options which you need for the current page.

# Portfolio Page

There is shortcode “[portfolio]” which will take all items which are created as custom post type in **Dashboard > Portfolio** and display it in the appropriate way.

## Add/Edit Portfolio Item

To Add a new Portfolio Item you need to open

***Dashboard > Portfolio > Add New***

Enter a Title and after that you need to set **“Featured Image”**

The screenshot shows the WordPress 'Edit Post' interface for a Portfolio item. The left sidebar contains navigation menus for Dashboard, Posts, Media, Pages, Comments, Team, Portfolio (selected), Appearance, Plugins, Users, Tools, Settings, and Collapse menu. The main content area is titled 'Edit Post' and shows the title 'Item 1'. Below the title is a permalink and an 'Add Media' button. The content area contains HTML code for a slider and text. The right sidebar shows the 'Publish' section with status 'Published', visibility 'Public', and a 'Featured Image' section with a preview image of various items.

Portfolio Preference

Custom thumb title on mouse Smartphone

Publish

Preview Changes

Status: Published Edit

Visibility: Public Edit

Published on: Dec 28, 2017 @ 22:35 Edit

Move to Trash Update

Featured Image

Click the image to edit or update

Remove featured image

After you have set the image, you need to add item content.

Also, below the editor, there is **“Portfolio Preference”**:

Portfolio Preference

---

Custom thumb title on mouse over   
*by default is used item title*

Thumb text on mouse over (second line)

Thumb image size

Link thumb to

Link thumb to Image:    
Enter a URL or upload an image

Link thumb to Video   
*For example: <http://vimeo.com/XXXXXX> or <http://www.youtube.com/watch?v=XXXXXX>*

Link thumb to External URL:   
*Set URL to external site*

Here you can set “Thumb title on mouse over text”, size of featured image and where to link when you click on portfolio item.

If you link to **“This Post”** when you click on featured image it will load via ajax content on **“Portfolio”** page.

If you link to **"Image"** you need to set **"Link thumb to image"** with image URL - it will open image in pop-up when you click on featured image.

If you link to **"Video"** you need to set **"Link thumb to video"** with:

YouTube video in format:

**<http://www.youtube.com/watch?v=XXXXXX>**

or Vimeo video in format:

**<http://vimeo.com/XXXXXX>**

Now, when you click on featured image it will open video in pop-up.

If you link to **"External URL"** you need to set URL in **"Link thumb to External URL"** in format **<http://yoururl.com>**

Now, when you click on featured image it will open your URL.

# Inspire

On this page is just basic code like this:

```
[image_slider auto="true" speed="2000"]  
  
[image_slide img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/img_01.png"  
href="#contact"]  
  
[image_slide img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/img_02.png"  
href="#services"]  
  
[image_slide img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/img_03.png"  
href="#team"]  
  
[/image_slider]
```

It is code for image slider. Also, for each slide there is a link to some section. This link is optional and also can be to some external page (not need to be inside the big/front page). If you need to link to external page, you need code like this:

```
[image_slide img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/img_03.png"  
href="http://YOURLINK.com"]
```

If you don't need the link, just remove part for link, like this:

```
[image_slide img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/img_03.png"]
```

# About

On this page you will find code for video popup:

```
[video_up thumb="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2017/12/video_img.jpg" video="https://www.youtube.com/watch?v=15cpIHjEsWI"]
```

You can set URL to Vimeo/YouTube video.

# News Page

Here you will find code like this:

```
[latest_posts num="6"]
```

It will show your 5 latest posts from blog.

# Pricing

Code for pricing table looks like this:

```
[pricing color="#de8234" title='BASIC' button_text="CHOOSE" price="$29" sub_price="per month" href="#" target="_self"]
```

```
<ul>
```

```
  <li>25 GB Storage</li>
```

```
  <li>24/7 Support</li>
```

```
  <li>Up to 50 Users</li>
```

```
  <li>Donec Estu</li>
```

```
  <li>Lorem Ipsum</li>
```

```
</ul>
```

```
[/pricing]
```

# Skills Page

Here you will find code like this:

```
[skills]
```

```
[skill percent="75%" text="Creativity"]
```

```
[skill percent="45%" text="Cooking"]
```

```
[skill percent="90%" text="PHP"]
```

```
[skill percent="65%" text="Marketing"]
```

```
[skill percent="85%" text="Design"]
```

```
[/skills]
```

# Team Page

On this page is just basic code like this:

```
[show_team]
```

There is shortcode “[**show\_team**]” which will take all team members which are created as custom post type in **Dashboard > Team** and display it in the appropriate way.

To edit the content for each member (which is loaded using ajax when you click on image) go to **Dashboard > Team**

# Clients

On this page is placed code for text/testimonial slider:

```
[text_slider auto="true" speed="2000" hover_pause="true"]
```

```
[text_slide name="Peter Hall" position="CEO"
```

```
img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/testimonial_img_01.jpg"]
```

A very small stage in a vast cosmic arena are creatures of the cosmos vanquish the impossible white dwarf astonishment. A still more glorious dawn awaits light.

```
[/text_slide]
```

```
[text_slide name="Jane Williams" position="DESIGNER"
```

```
img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/testimonial_img_02.jpg"]
```

Globular star cluster, another world brain is the seed of intelligence a billion trillion bits of moving fluff hearts of the stars. Hypatia preserve and cherish that pale blue dot.

```
[/text_slide]
```

```
[text_slide name="John Smith" position="GURU"
```

```
img="http://demo.cocobasic.com/cardea-wp/demo-1/wp-content/uploads/2018/01/testimonial_img_03.jpg"]
```

Hypatia preserve and cherish that pale blue dot. Hundreds of thousands! Inconspicuous motes of rock and gas the carbon in our apple pies creatures of the cosmos.

```
[/text_slide]
```

```
[/text_slider]
```

# Contact

On this page you will find shortcode for contact form. It is shortcode from **Contact Form 7** plugin which looks like this:

```
[contact-form-7 id="149" title="Contact form 1"]
```

To set your contact form you need to open **Dashboard>Contact>Contact Forms** and to edit the contact form.

Our demo code for contact form looks like this:

The screenshot shows the WordPress dashboard sidebar on the left with the 'Contact' menu item selected. The main content area displays the 'Contact form 1' editor. At the top, there is a title 'Contact form 1' and a text box containing the shortcode `[contact-form-7 id="149" title="Contact form 1"]`. Below this, there are tabs for 'Form', 'Mail', 'Messages', and 'Additional Settings'. The 'Form' tab is active, showing a text area with the following shortcode template:

```
[text* your-name placeholder "Name"]  
[email* your-email placeholder "Email"]  
[textarea your-message placeholder "Message..."]  
[submit "Send"]
```

Code for contact form:

```
[text* your-name placeholder "Name"]  
[email* your-email placeholder "Email"]  
[textarea your-message placeholder "Message..."]  
[submit "Send"]
```

# Milestones

Simple code:

```
[milestones]  
[milestone num="35"]Terabytes of [br] files uploaded[/milestone]  
[milestone num="67K"]Lines of CSS code wrote[/milestone]  
[milestone num="74"]Cups of coffee dranked per week[/milestone]  
[milestone num="389"]Happy [br] clients served[/milestone]  
[/milestones]
```

# Shortcodes

This theme has shortcodes. When you install theme plugin named **“CocoBasic - Cardea WP”**, you will be able to use shortcodes used in this theme. After installation and activation the plugin, open page/post and you will see new icon in the editor. After click on it pop up window with shortcodes list will appear. Choose shortcode you want to insert and you will get a window with fields of attributes.

# Plugins

## **CocoBasic - Cardea WP plugin**

User interface for Cardea WP. It will add Portfolio and Team post types and also will add shortcodes.

## **Contact Form 7**

Contact Form 7 can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.

<https://wordpress.org/plugins/contact-form-7/>

# Source & Credits

Special thanks to creators and contributors of these awesome libraries, we couldn't done this without them.
