Theme Manual

Blanka - WordPress Theme

Thank You :)

Thanks for purchasing our theme. We really appreciate your support and trust in us. We worked hard to make Blanka WP theme easy to edit as much as possible. Hopefully, you will enjoy using it.

Have fun!

How To Install?

Once you have the zip archive ready, you need to go to your dashboard, which is www.yourwebsite.com/wp-admin and go to **Appearance > Themes > Install Themes** and, in the top menu, select **Upload**. Now, select the zip archive and just install it normally.

*Note - Theme is placed in "**Blanka WP - THEME**" folder and you need to upload zip file from that folder (zip file called **blanka-wp.zip**)
Also, there is a Child theme available placed in same folder (zip file called **blanka-wp-child.zip**)

After installing the theme, you will get alert of required plugins:
CocoBasic - Blanka WP and **Contact Form 7**. You need to install and to activate those plugins.

Import Content

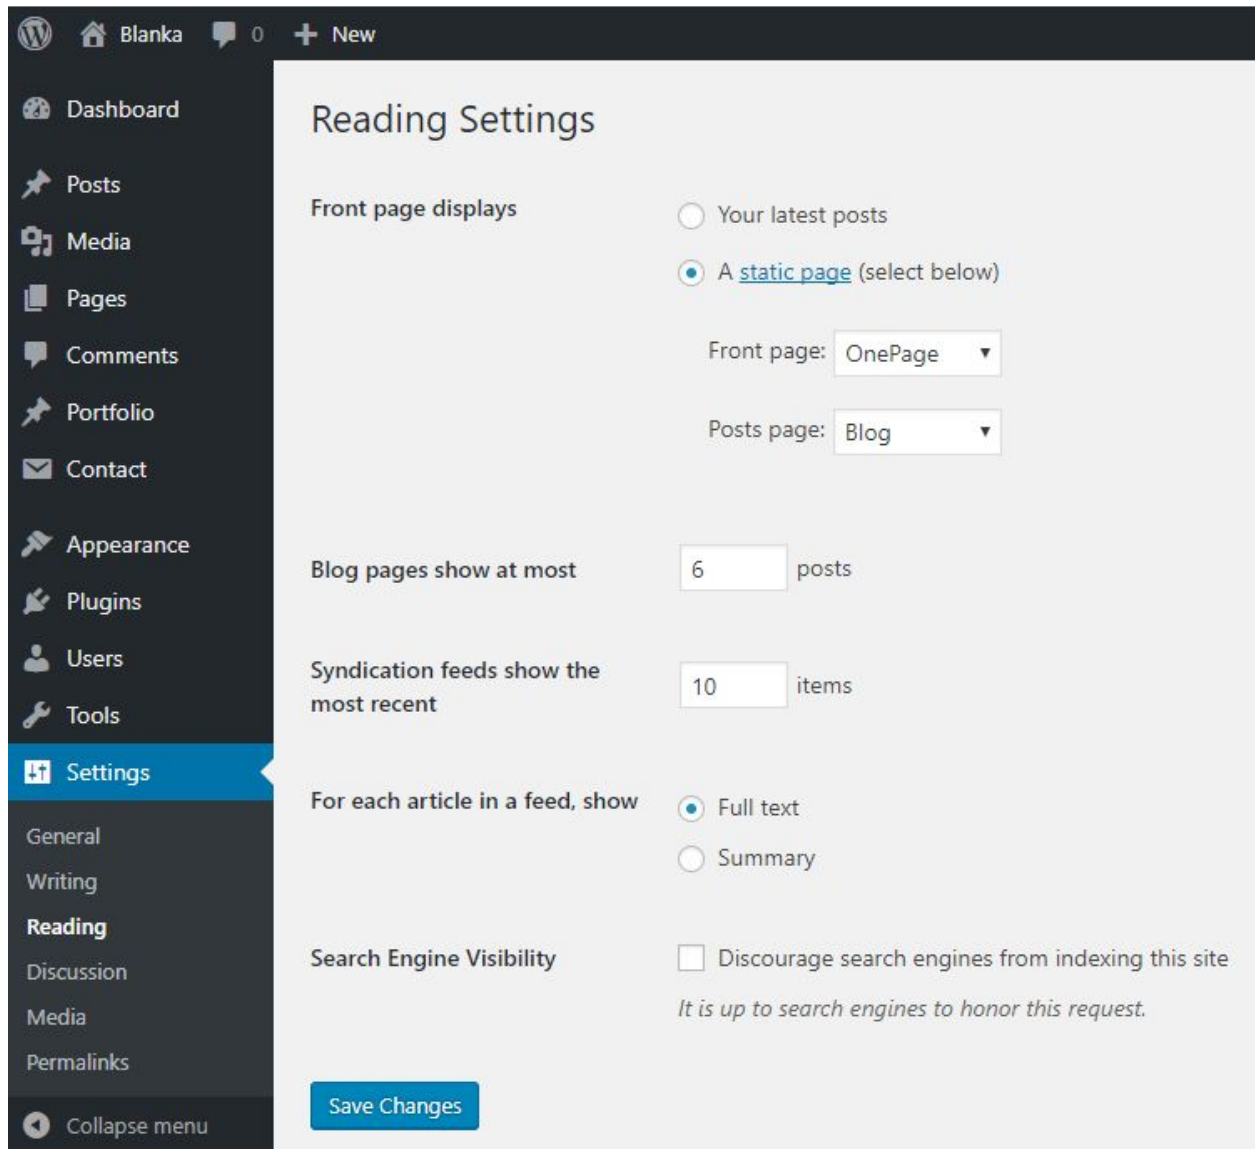

This theme comes with our dummy/demo content which can be imported directly on your website to achieve the same look as our demo. To import our content go to your WordPress admin page dashboard and select Tools > Import and then choose WordPress option.

Here is a small video tutorial how to install and import demo content.

<https://youtu.be/kuVj8w1VgWY>

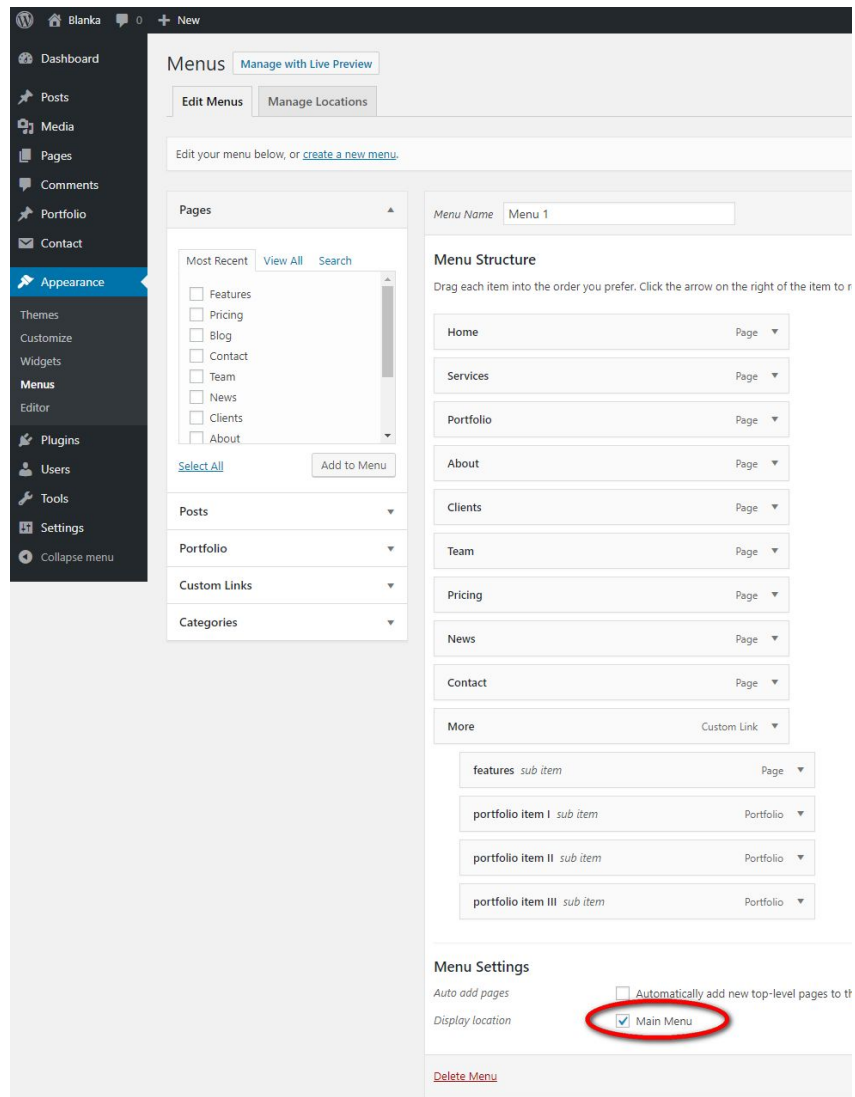

Demo Content is placed in "Blanka WP - DEMO CONTENT" folder.

After you have imported dummy/demo content go to **Dashboard > Settings > Reading** and set **Front page displays: "A static page"** and select **OnePage** for **Front page**. For **Posts page** select **Blog**.

Creating Menu

In order to create menu, go to **Appearance > Menus**. You can see on the image below example how menu can look like.

* Don't forget to check "Main Menu".

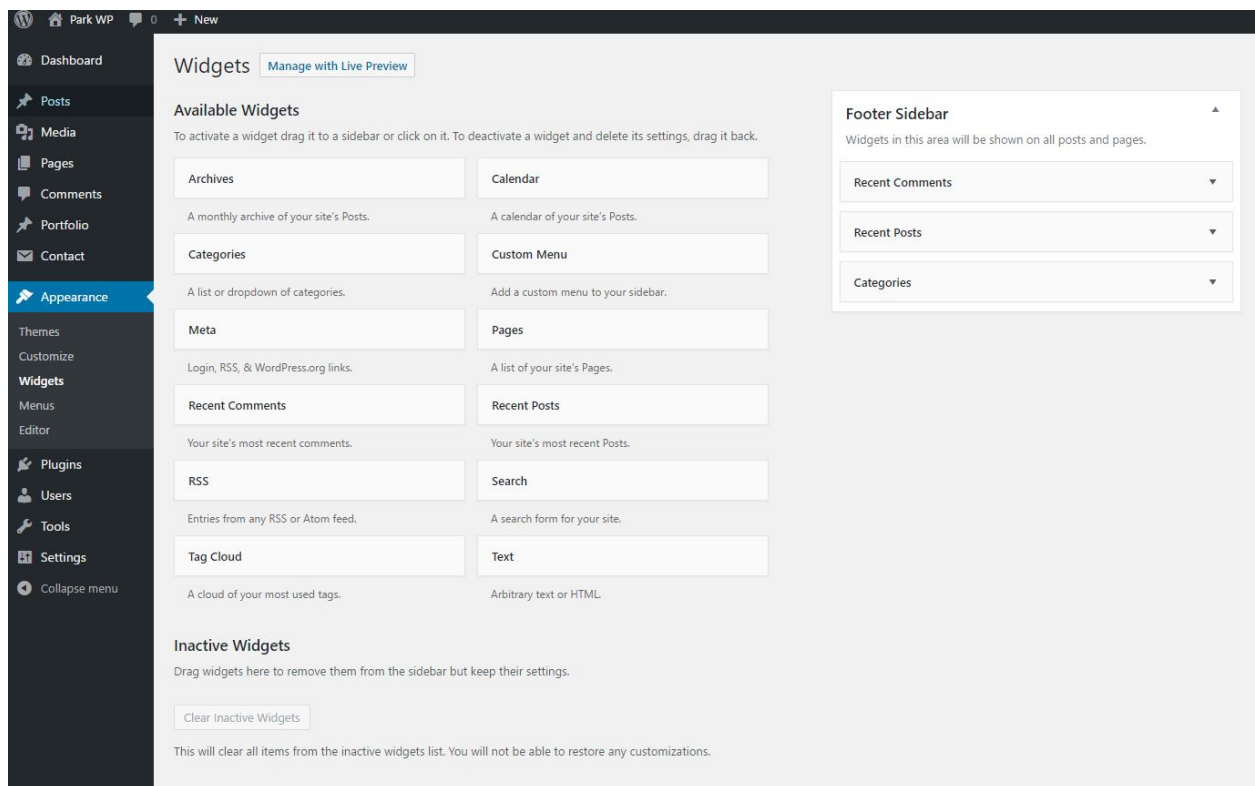

Sidebar (Footer) Widget

***Note** - on our demo we don't use footer widget

To set/edit widgets in footer go to:

Appearance > Widgets

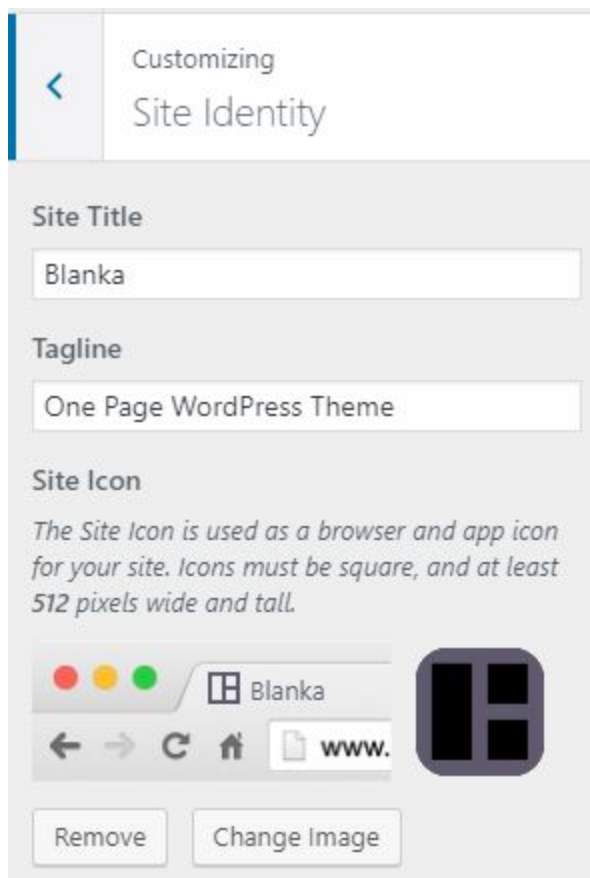

Here is how it looks our demo widgets area.

Theme Customization

To open customizer click on **Dashboard > Appearance > Customize**

```
2017 Blanka Wordpress Theme by <a href="http://cocobasic.com">CocoBasic</a>.
```

and:

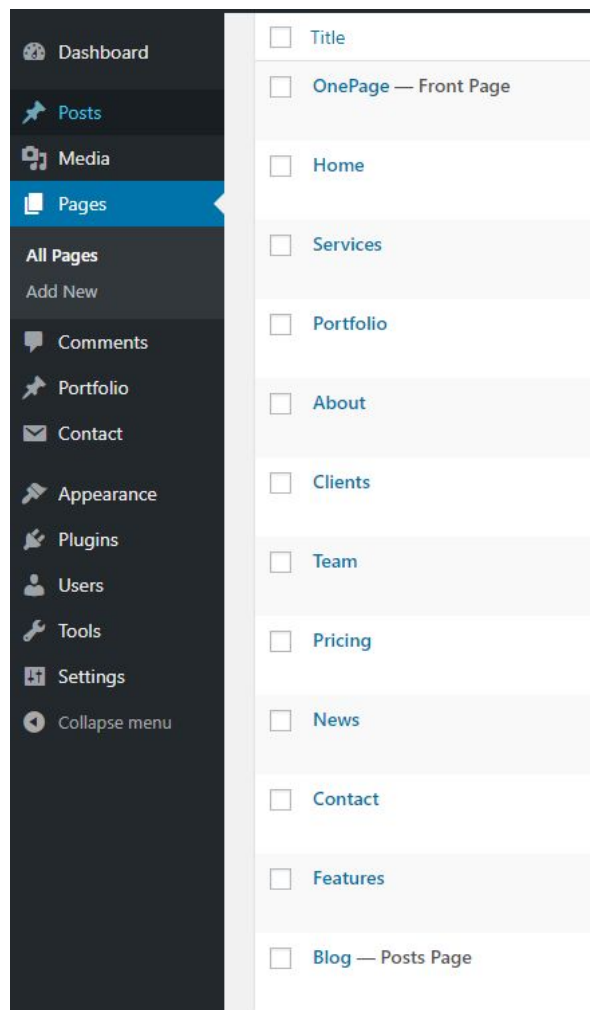

```
<a href="#">Twitter</a><a href="#">Facebook</a><a href="#">Instagram</a><a href="#">Behance</a>
```

Content Editing

To edit Page, just open a page that you want to edit and replace the existing content with your own (text, images, videos).

After importing demo content, you will have pages like this:

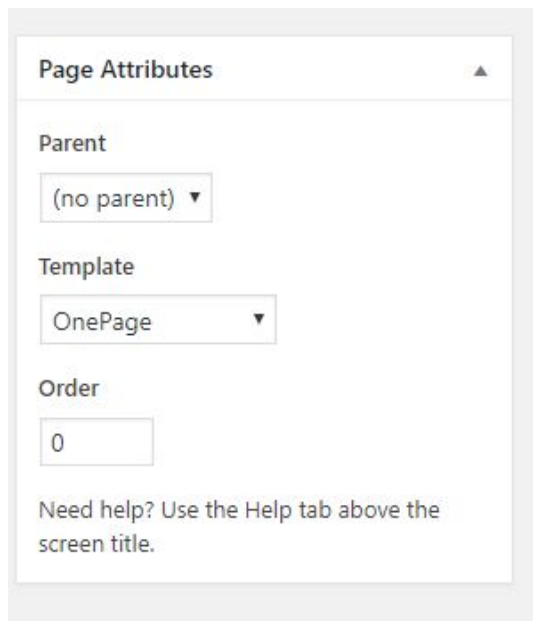

Now, for each page we will explain just some part of code which is specific for it:

OnePage

This is main page (it is set to be Front Page) and that page is collecting all other pages inside it and make one big page (home page).

Important for this page is to set:

Page Attributes > Template > OnePage

The image shows a screenshot of the 'Page Attributes' panel in a WordPress editor. The panel has a title bar with 'Page Attributes' and a small upward-pointing triangle icon. Below the title bar, there are three sections: 'Parent' with a dropdown menu showing '(no parent)'; 'Template' with a dropdown menu showing 'OnePage'; and 'Order' with a text input field containing the number '0'. At the bottom of the panel, there is a small text note: 'Need help? Use the Help tab above the screen title.'

***Note** - This page has no content in editor (it will automatically all other pages which are set to be the part of this big/front page)

Home

This page is first section in front “OnePage” page. The content on this page is basic and it looks like this:

```
[curve_text class="center"]Hello[/curve_text]
```

```
[intro_desc class="center"]We are old school Web Designers [br] & Developers from New York[/intro_desc]
```

```
&nbsp;
```

```
&nbsp;
```

```
[button position="center" href="#contact"]Hire Us Now[/button]
```

But, there is also background image which has “parallax” effect and there is a scroll animation image. All this settings and much more you can edit just below the page editor in “Page Preference”. Here it is how it looks like:

The image shows a WordPress 'Edit Page' interface. The top section displays the page content in a visual editor. The page title is 'Home' and the permalink is 'http://demo.cocobasic.com/blanka-wp/home/'. The content includes a heading 'Hello!', a paragraph 'We are old school Web Designers & Developers from New York', and a button 'Hire Us Now'. The bottom section is the 'Page Preference' panel, which includes settings for 'Show Page Title' (set to 'No'), 'Page Custom Title', 'Page Description', 'Full Screen Page' (set to 'Yes'), 'Page Background Color' (a color picker), 'Page Background Image URL' (with an 'Upload Image' button), 'Background Image Position' (set to 'Center Center'), 'Background Image Repeat' (set to 'No Repeat'), 'Background Image Size' (set to 'Cover'), 'Background Image Scroll' (set to 'Parallax'), 'Page Structure' (set to 'Include in One Page'), 'Scroll Animation' (set to 'Yes'), and 'Page Custom CSS'.

Here you can “Show/Hide” page title, use “Custom Page Title”, add “Page Description”, set page to be full height of screen, change page background color/image, set background image size/position/repeat, make it to be “Parallax”, show scroll animation image on bottom of

page, add custom CSS for just current page.

But, the most important option is to set **“Page Structure”**. With this option you can select how to use the current page - to be **“separated / stand alone”** page (it will regular page, not included in front/big page) or to be **“included in One Page”** (it will be included in front/big page).

All this settings are available for all pages, so, each of them you can make it to be included or not in front/big One Page.

Services

On this page you will find code like this:

```
[col size="one_third" class="animate"]  
  
[service title="Pixel Preciese"  
img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/icon_01.png" href="#clients"]  
  
Cosmic ocean another world the only home we've ever known  
  
[/service]  
  
[/col]
```

```
[col size="one_third" class="animate wait-03s"]  
  
[service title="Top Notch Support"  
img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/icon_02.png" href="#team"]  
  
The sky calls to us rig veda gathered by sun carbon in our apple  
  
[/service]  
  
[/col]
```

```
[col size="one_third_last" class="animate wait-06s"]  
  
[service title="Web Scalable"  
img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/icon_03.png" href="#contact"]  
  
Fugue how far away preserve and cherish that pale blue dot  
  
[/service]  
  
[/col]
```

There is code for 3 columns and for 3 service items. Each column has additional class **“animate”** which mean it will have **“fadeTop”** animation. Also, the second and third column has class **“wait-03s”** and **“wait-06s”**

which mean, there is animation delay of 0.3s and 0.6s. You can set any class from “wait-01s” ... “wait-15s” and to have 0.1s to 1.5s delay.

Portfolio Page

On this page is just basic code like this:

```
[full_width]
[portfolio]
[/full_width]
```

With “**[full_width]**” page content will be full width (no max 1070px which is default).

Also, there is shortcode “**[portfolio]**” which will take all items which are created as custom post type in **Dashboard > Portfolio** and display it in the appropriate way.

News Page

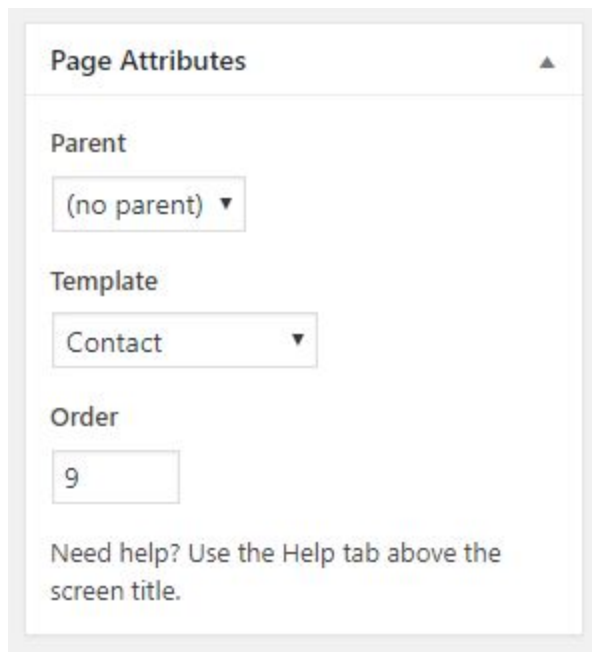

Here you will find code like this:

```
[latest_posts num="5"]
```

It will show your 5 latest posts from blog.

Contact Page

This page must have a custom Template "**Contact**".

The image shows a screenshot of the 'Page Attributes' panel in a WordPress admin interface. The panel is titled 'Page Attributes' and has a small upward-pointing triangle icon in the top right corner. It contains three sections: 'Parent' with a dropdown menu showing '(no parent)'; 'Template' with a dropdown menu showing 'Contact'; and 'Order' with a text input field containing the number '9'. At the bottom of the panel, there is a line of text: 'Need help? Use the Help tab above the screen title.'

When the custom Template “**Contact**” is selected, the “Page Preference” looks a little bit different. There is additional field where you should past the contact form shortcode (we are using Contact Form 7) and also there is one more color picker where you can set background color for left part of contact page.

Page Preference

Contact Form Code

Left Part Content Background Color

Page Custom Title

Page Description

Page Background Color 

Page Background Image URL
Enter a URL or upload an image

Feature Page

On this page is placed a lot of shortcodes. But this page is also set to be “Separated / Stand Alone” - that mean, it is not included in front/big page.

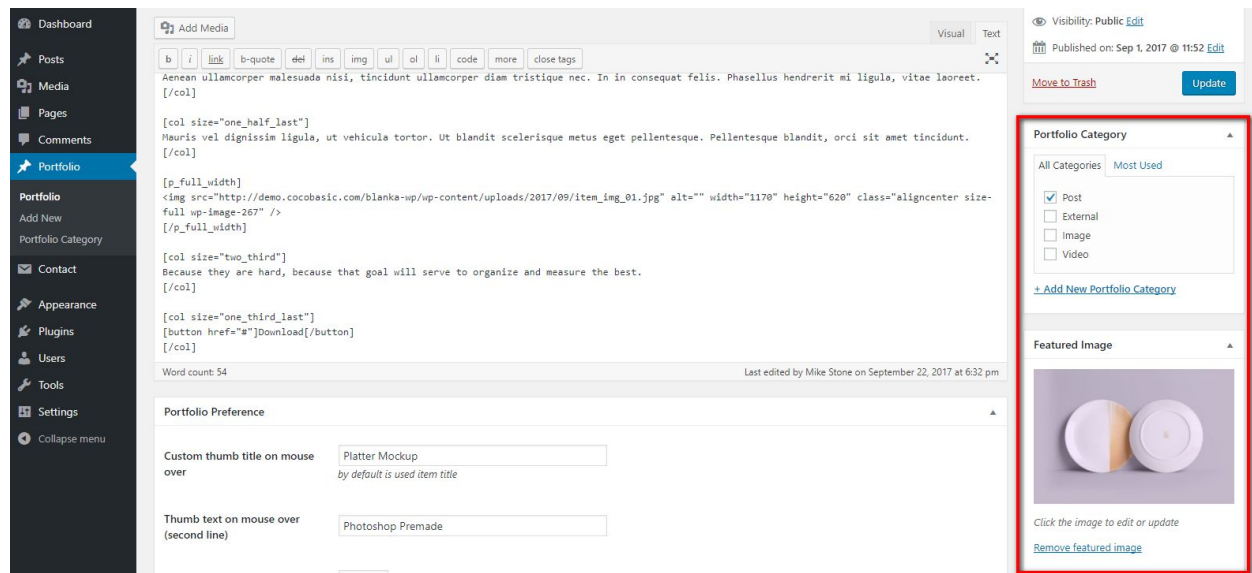

Background Image Scroll	Normal ▼
Page Structure	Separated / Stand Alone Page ▼
Scroll Animation	No ▼ <i>show scroll animation on bottom of page</i>
Page Custom CSS	<div style="border: 1px solid #ccc; height: 60px; width: 100%;"></div> <i>additional CSS just for this page (optional)</i>

Add/Edit Portfolio Item

To Add a new Portfolio Item you need to open

Dashboard > Portfolio > Add New

Enter a Title and after that you need to set **“Featured Image”** and **“Portfolio Category”**:

The screenshot displays the WordPress 'Add New' interface for a Portfolio item. On the left is a dark sidebar with navigation options: Dashboard, Posts, Media, Pages, Comments, Portfolio (highlighted), Portfolio Category, Contact, Appearance, Plugins, Users, Tools, Settings, and Collapse menu. The main content area is split into two panes. The top pane is the visual editor, showing a rich text editor with a toolbar and a preview of the content. The content includes a paragraph of placeholder text, a centered image placeholder with the following code: ``, another paragraph, and a button placeholder with the code: `[button href="#">Download[/button]`. The bottom pane is the 'Portfolio Preference' section, which contains two text input fields: 'Custom thumb title on mouse over' with the value 'Platter Mockup' and 'Thumb text on mouse over (second line)' with the value 'Photoshop: Premade'. On the right side of the editor, there are two settings sections: 'Portfolio Category' and 'Featured Image'. The 'Portfolio Category' section has two tabs: 'All Categories' and 'Most Used'. Under 'All Categories', there are four checkboxes: 'Post' (checked), 'External', 'Image', and 'Video'. Below this is a link '+ Add New Portfolio Category'. The 'Featured Image' section shows a thumbnail image of two white ceramic platters, one with a gold-colored center. Below the image is the text 'Click the image to edit or update' and a link 'Remove featured image'.

After you have set the image and category, you need to add item content.

Also, below the editor, there is **“Portfolio Preference”**

Portfolio Preference ▲

Custom thumb title on mouse over

Post Header Content

```
[image_slider name="slider2" speed="1500" hover_pause="true" auto="true"]
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_04.jpg"]
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_05.jpg"]
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_06.jpg"]
[/image_slider]
```

optional

Here you can set “Mouse over text”, size of featured image, where to

link when you click on portfolio item, item info and header content.

If you link to **"This Post"** when you click on featured image it will open portfolio item post.

If you link to **"Image"** you need to set **"Link thumb to image"** with image URL - it will open image in pop-up when you click on featured image.

If you link to **"Video"** you need to set **"Link thumb to video"** with:

YouTube video in format:

<http://www.youtube.com/watch?v=XXXXXX>

or Vimeo video in format:

<http://vimeo.com/XXXXXX>

Now, when you click on featured image it will open video in pop-up.

If you link to **"External URL"** you need to set URL in **"Link thumb to External URL"** in format **<http://yoururl.com>**

Now, when you click on featured image it will open your URL.

Also, here you can set **different background color / background image for each item.**

“**Post Header Content**” will be displayed in head of single portfolio item, and here you can place image, text, video, image slider, soundcloud iframe...

Here are some examples what can you use in “**Post Header Content**”:

- Image:

```

```

- Slider:

```
[image_slider name="slider2" speed="1500" hover_pause="true" auto="true"]
```

```
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_04.jpg"]
```

```
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_05.jpg"]
```

```
[image_slide img="http://demo.cocobasic.com/blanka-wp/wp-content/uploads/2017/09/about_img_06.jpg"]
```

```
[/image_slider]
```

- Youtube

```
<iframe width="560" height="315" src="https://www.youtube.com/embed/aqz-KE-bpKQ" allowfullscreen></iframe>
```

- Vimeo

```
<iframe src="https://player.vimeo.com/video/157276599?color=ffffff" width="640" height="360" allowfullscreen></iframe>
```

Shortcodes

This theme has shortcodes. When you install theme plugin named **“CocoBasic - Blanka WP”**, you will be able to use shortcodes used in this theme. After installation and activation the plugin, open page/post and you will see new icon in the editor. After click on it pop up window with shortcodes list will appear. Choose shortcode you want to insert and you will get a window with fields of attributes.

Plugins

CocoBasic - Blanka WP plugin

User interface for Blanka WP. It will add Portfolio post types and also will add shortcodes.

Contact Form 7

Contact Form 7 can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.
