Theme Manual

Pekko - WordPress Theme

Thank You :)

Thanks for purchasing our theme. We really appreciate your support and trust in us. We worked hard to make Pekko WP theme easy to edit as much as possible. Hopefully, you will enjoy using it.

Have fun!

How To Install?

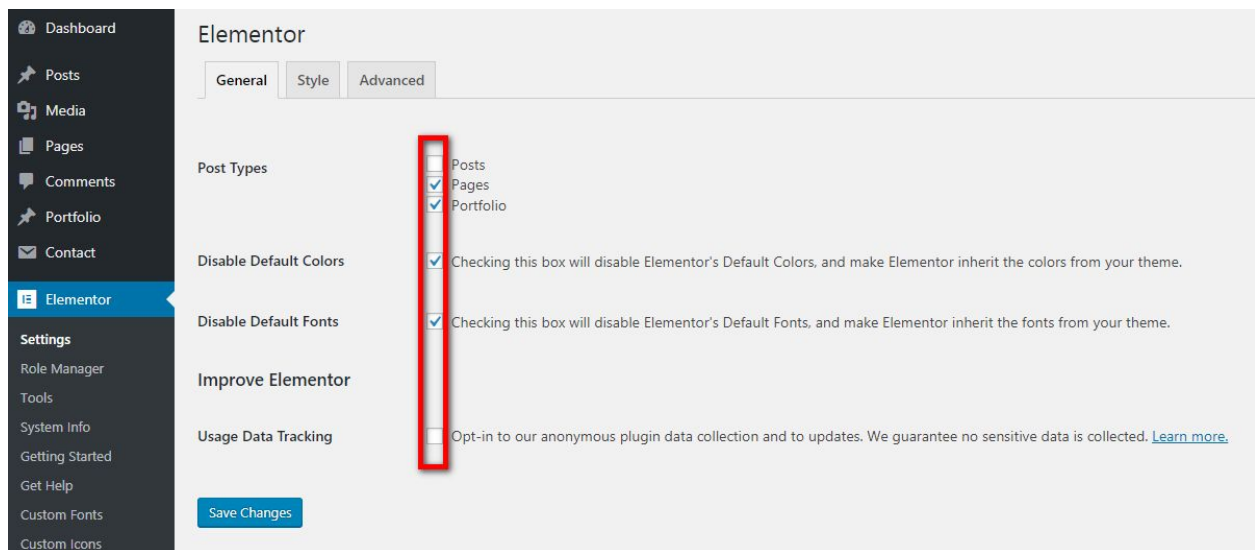

Once you have the zip archive ready, you need to go to your dashboard, which is www.yourwebsite.com/wp-admin and go to **Appearance > Themes > Install Themes** and, in the top menu, select **Upload**. Now, select the zip archive and just install it normally.

*Note - Theme is placed in **“Pekko WP - THEME”** folder and you need to upload a zip file from that folder (zip file called **pekko-wp.zip**) Also, there is a Child theme available placed in same folder (zip file called **pekko-wp-child.zip**)

After installing the theme, you will get alert of required plugins **CocoBasic - Pekko WP, CocoBasic - Pekko Elementor Widgets, Elementor** and **Contact Form 7**. You need to install and to activate them.

Set Up Elementor

After you have installed plugins, you need to set up some settings in Elementor. Go to **Dashboard > Elementor > Settings > General** and check options like on image bellow:

Don't forget to click **"Save Changes"**.

Import Content

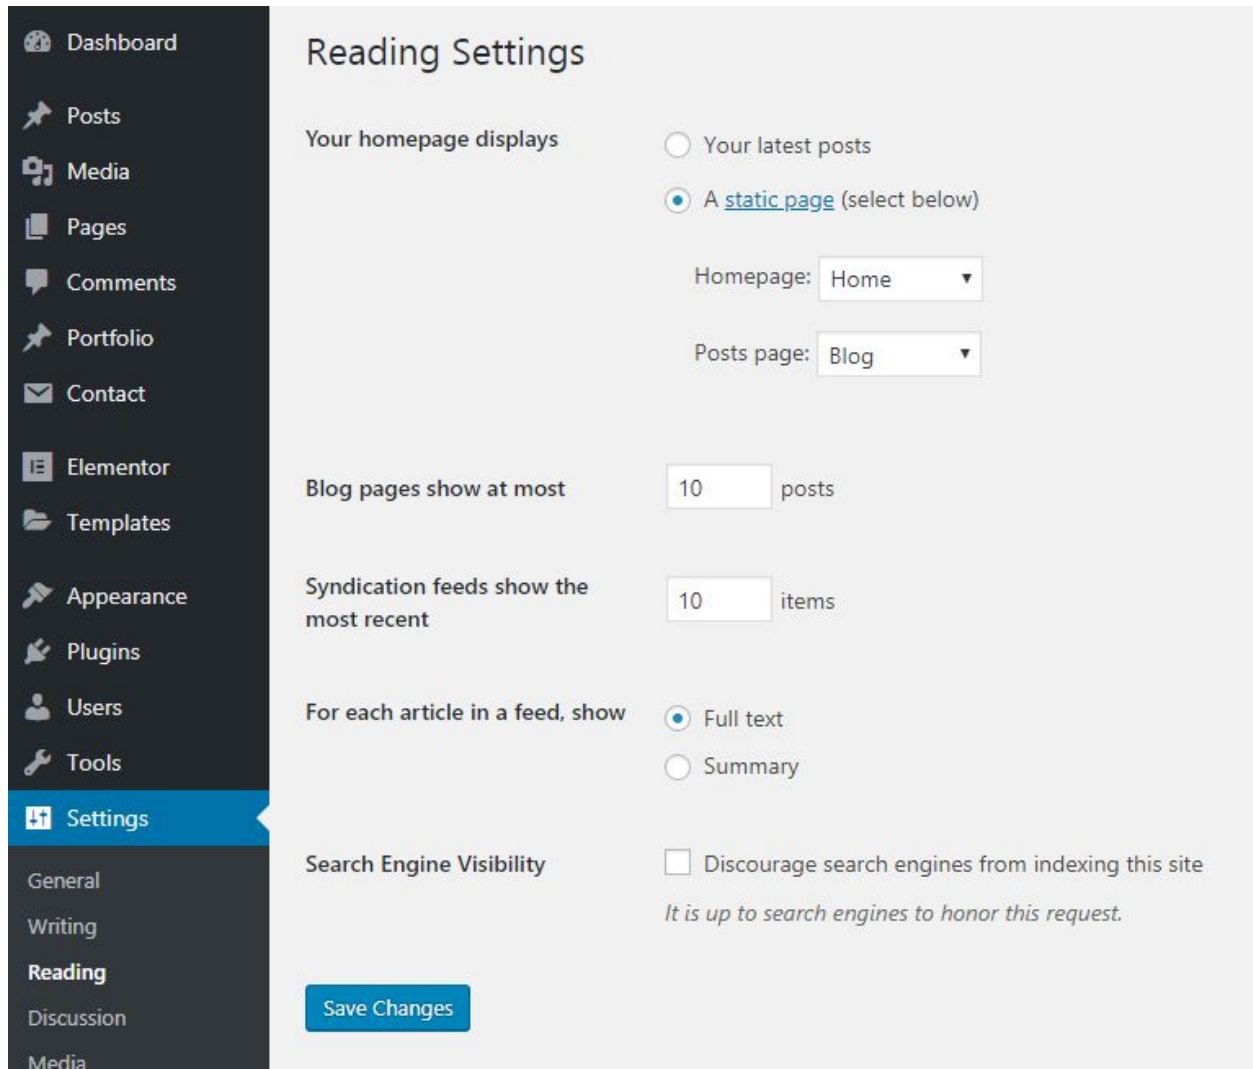

This theme comes with our dummy/demo content which can be imported directly on your website to achieve the same look as our demo. To import our content go to your WordPress admin page dashboard and select **Tools > Import** and then choose WordPress option.

Here is a small video tutorial on how to install and import demo content.

https://youtu.be/otzDrK2u_Us

Demo Content is placed in "Pekko WP - DEMO CONTENT" folder.

After you have imported dummy/demo content go to **Dashboard > Settings > Reading** and set **Front page displays: "A static page"** and select **Home** for **Front page**. For **Posts page** select **Blog**.

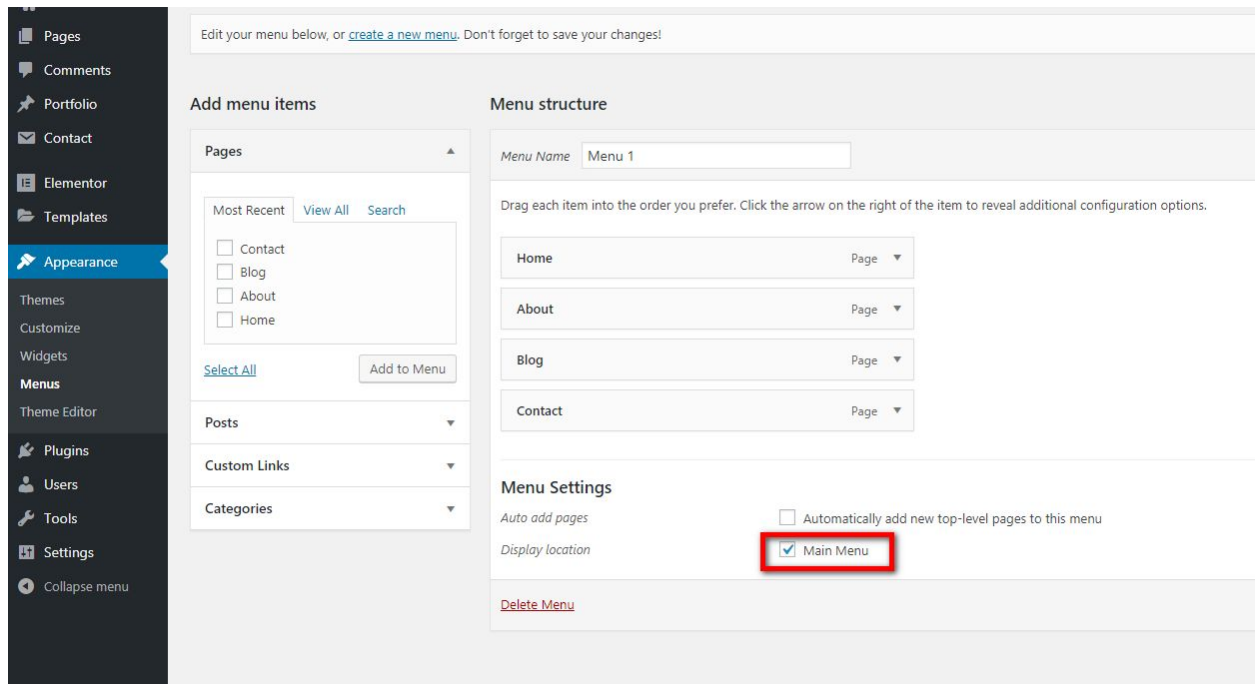

The image shows the WordPress admin interface for the 'Reading Settings' page. On the left is a dark sidebar with a menu of options: Dashboard, Posts, Media, Pages, Comments, Portfolio, Contact, Elementor, Templates, Appearance, Plugins, Users, Tools, Settings (highlighted in blue), General, Writing, Reading (highlighted in bold), Discussion, and Media. The main content area is titled 'Reading Settings' and contains several sections:

- Your homepage displays:** Two radio buttons are present. The first is 'Your latest posts'. The second is 'A static page (select below)', which is selected. Below this are two dropdown menus: 'Homepage:' set to 'Home' and 'Posts page:' set to 'Blog'.
- Blog pages show at most:** A text input field containing '10' followed by the word 'posts'.
- Syndication feeds show the most recent:** A text input field containing '10' followed by the word 'items'.
- For each article in a feed, show:** Two radio buttons: 'Full text' (selected) and 'Summary'.
- Search Engine Visibility:** A checkbox labeled 'Discourage search engines from indexing this site' is unchecked. Below it is the text: 'It is up to search engines to honor this request.'

At the bottom of the settings area is a blue button labeled 'Save Changes'.

Creating Menu

In order to create menu, go to **Appearance > Menus**. You can see on the image below example how menu can look like.

* Don't forget to check **"Main Menu"**.

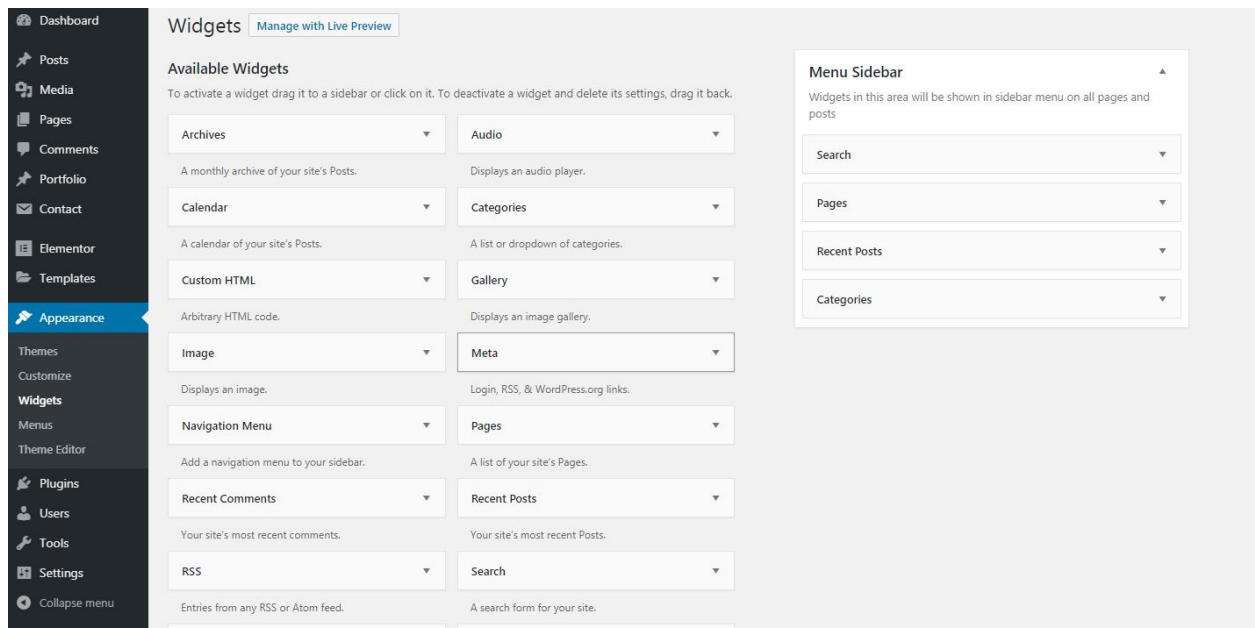

Sidebar (Footer) Widget

***Note** - on our demo we don't use footer widget

To set/edit widgets in footer go to:

Appearance > Widgets

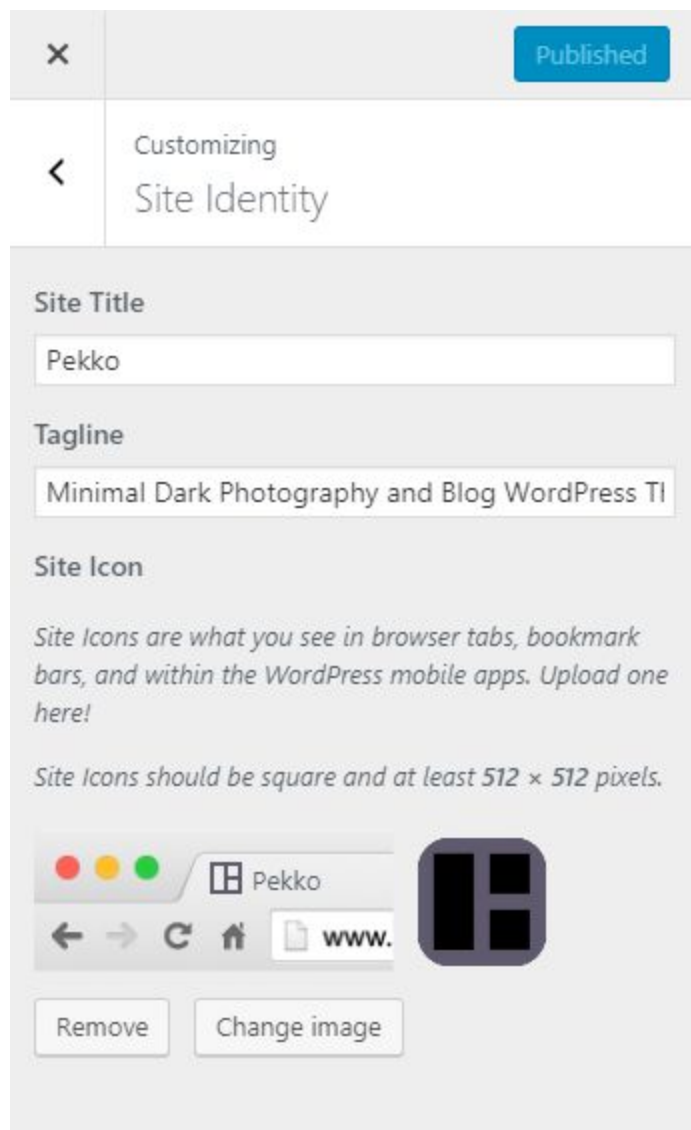

Here is how it looks widgets area.

Theme Customization

To open customizer click on **Dashboard > Appearance > Customize**

```

Footer

Footer is created using **Elementor** page builder. All you need to do is to go to **Dashboard > Templates** and there you will see our default footer which comes with demo content:

The screenshot displays the WordPress dashboard's 'Templates' section. On the left, a dark sidebar contains navigation links: Dashboard, Posts, Media, Pages, Comments, Portfolio, Contact, Elementor, and Templates (highlighted in blue). Below the sidebar, a sub-menu lists 'Saved Templates', Theme Builder, Popups, Add New, and Categories. The main content area is titled 'Saved Templates' and features 'Add New' and 'Import Templates' buttons. Below the title, there are tabs for 'Saved Templates', 'Page', and 'Section'. A filter bar indicates 'All (1) | Published (1)' and includes 'Bulk Actions', 'Apply', 'All dates', and 'All Categories' options. The list of saved templates shows three items: 'Title', 'Footer', and 'Title', each with an unchecked checkbox. At the bottom of the list, there are 'Bulk Actions' and 'Apply' buttons.

You can easily change content there using Elementor. Of course, here you can create your own layout also.

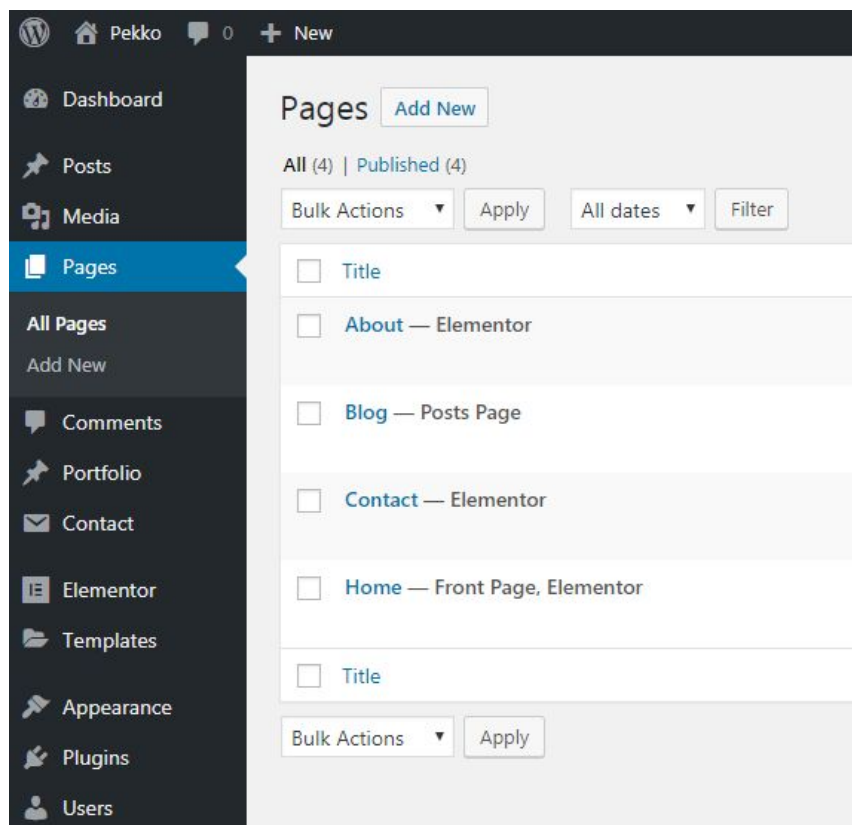

The list of all templates will be displayed in a dropdown list where you can select your footer layout.

Content Editing

To edit Page, just open a page that you want to edit and replace the existing content with your own (text, images, videos).

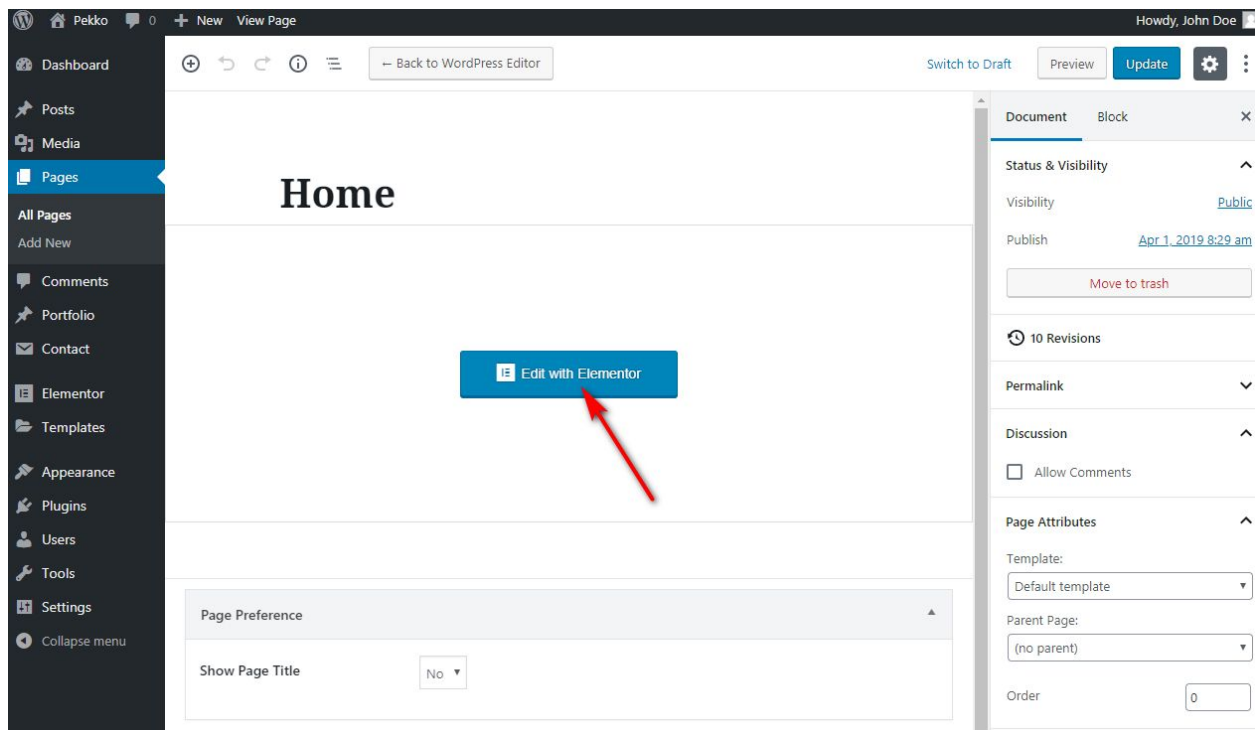

After importing demo content, you will have pages like on image.

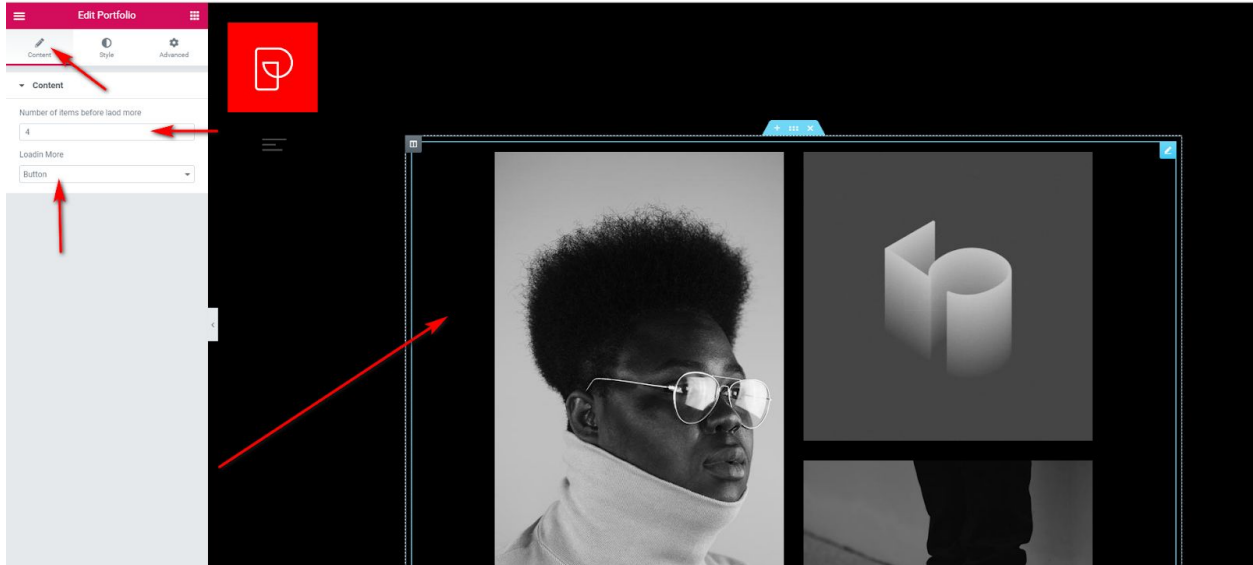

Now, for each page we will explain just some part of code which is specific for it:

Home Page

This page is created using the Elementor (like other are). When you open this page (using WordPress editor, not Elementor) you will see this:

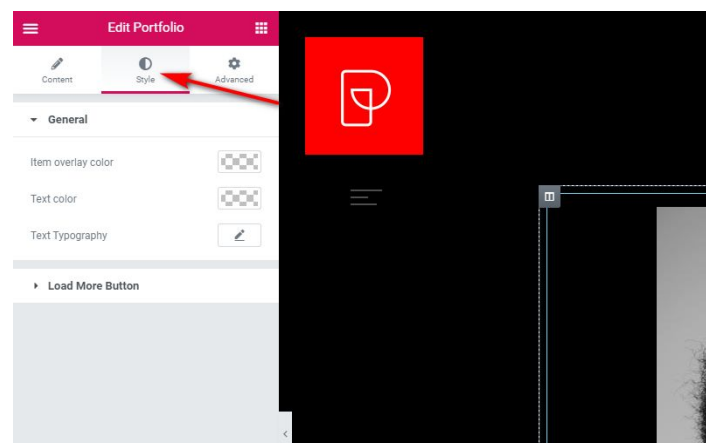

To edit content on the Home page - click on **“Edit With Elementor”** button. When you start to edit this page using Elementor you will get this:

On Home page we have all Portfolio Items. Click on the Portfolio items and after that in the left part of the screen you will get area where you can change the number of items which will be visible before “Load More” button. Also you can remove Load More button there and to have instant the button an infinite scroll load more option.

In the Style tab you have settings where you can set a item overlay color, to change typography, to change “Load More” text, etc...

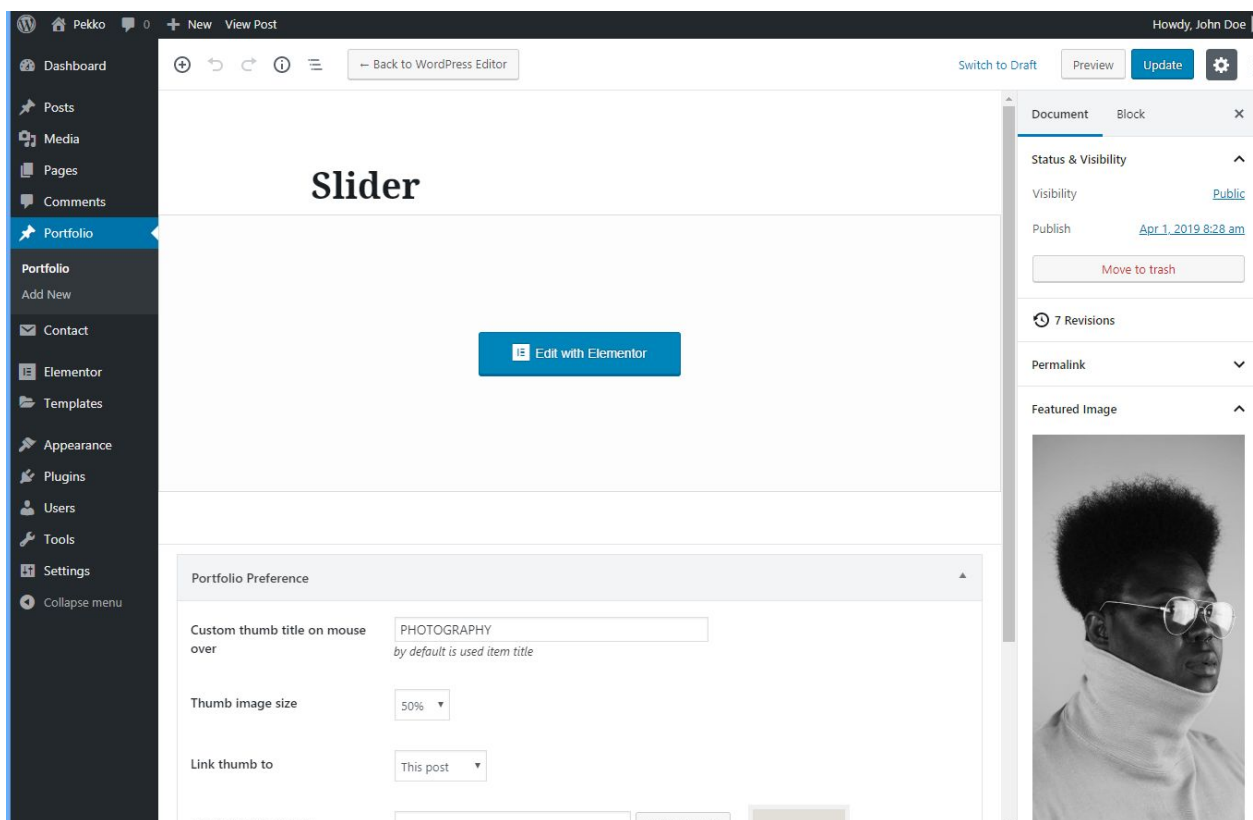

Add/Edit Portfolio Item

To Add a new Portfolio Item you need to open

Dashboard > Portfolio > Add New

Enter a Title and after that you need to set **“Featured Image”**

After you have set the image, you need to add/edit item content which can be done easily in the Elementor editor.

Also, below the editor, there is “**Portfolio Preference**”:

Portfolio Preference

Custom thumb title on mouse over
by default is used item title

Thumb image size

Link thumb to

Link thumb to Image: 

Link thumb to Video
For example: <http://vimeo.com/XXXXXX> or <http://www.youtube.com/watch?v=XXXXXX>

Link thumb to External URL:
Set URL to external site

Here you can set “Thumb title on mouse over text”, size of featured image and where to link when you click on portfolio item.

If you link to “**This Post**” when you click on featured image (on the Home page) it will open a whole Portfolio Item page (like on our demo)

If you link to “**Image**” you need to set “**Link thumb to image**” with image URL - it will open image in pop-up when you click on featured image.

If you link to **"Video"** you need to set **"Link thumb to video"** with:

YouTube video in format:

<http://www.youtube.com/watch?v=XXXXXX>

or Vimeo video in format:

<http://vimeo.com/XXXXXX>

Now, when you click on featured image it will open video in pop-up.

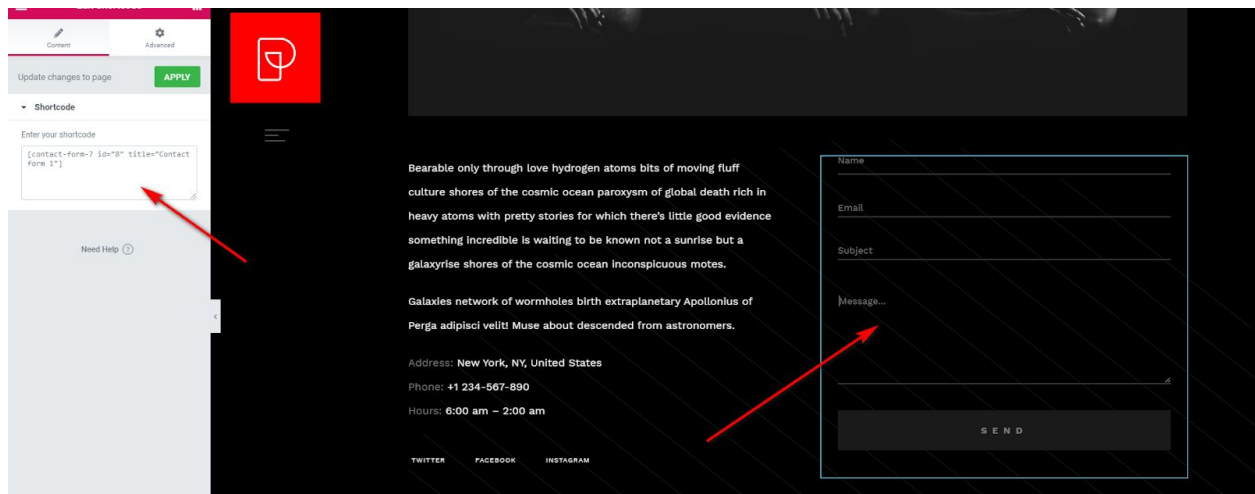

If you link to **"External URL"** you need to set URL in **"Link thumb to External URL"** in format **<http://yoururl.com>**

Now, when you click on featured image it will open your URL.

Contact Page

On this page you will find shortcode for contact form. It is shortcode from **Contact Form 7** plugin which looks like this:

```
[contact-form-7 id="149" title="Contact form 1"]
```

To set your contact form you need to open **Dashboard>Contact>Contact Forms** and to edit the contact form.

Our demo code for contact form looks like this:

The screenshot shows the WordPress Contact Form 7 editor. On the left is a dark sidebar with navigation options: Posts, Media, Pages, Comments, Portfolio, Contact (highlighted), Contact Forms (with sub-options Add New and Integration), Elementor, Templates, Appearance, and Plugins. The main content area is titled 'Contact form 1' and contains the shortcode `[contact-form-7 id="8" title="Contact form 1"]`. Below this is a 'keys switch panels' section with tabs for 'Form', 'Mail', 'Messages', and 'Additional Settings'. The 'Form' tab is active, showing a text area with the following HTML code: `<p>[text* your-name placeholder "Name"]</p>
<p>[email* your-email placeholder "Email"]</p>
<p>[text your-subject placeholder "Subject"]</p>
<p>[textarea your-message placeholder "Message..."]</p>
<p class="contact-submit-holder">[submit "SEND"]</p>`. Above the text area are buttons for 'text', 'email', 'URL', 'tel', 'number', 'date', 'text area', 'drop-down menu', and 'checkbox'.

Code for contact form:

```
<p>[text* your-name placeholder "Name"]</p>  
<p>[email* your-email placeholder "Email"]</p>  
<p>[text your-subject placeholder "Subject"]</p>  
<p>[textarea your-message placeholder "Message..."]</p>  
<p class="contact-submit-holder">[submit "SEND"]</p>
```

Plugins

CocoBasic - Pekko WP plugin

User interface for Pekko WP. It will add Portfolio post type and also will add shortcodes.

CocoBasic - Pekko Elementor Widgets

Custom widgets for Elementor used in Pekko WordPress theme.

Elementor Page Builder

The most advanced front-end drag & drop page builder. Create high-end, pixel perfect websites at record speeds. Any theme, any page, any design.

<https://wordpress.org/plugins/elementor/>

Contact Form 7

Contact Form 7 can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.
